DETAILED ACTION

1. The amendment filed on 9/29/06 has been entered. Applicants have amended the specification and claims 1-7 and 17. Claims 11-13 and 18-29 are cancelled.

Claims 1-10 and 14-17 are treated on the merits in this Office Action.

Specification

2. The amended specification is approved. The objections to the specification are withdrawn.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 17: "The bonding structure as claimed in claim 4, wherein a second metal layer is formed on **said of electrodes** and on said bonding layer located on said second substrate" is changed to:

-- The bonding structure as claimed in claim 4, wherein a second metal layer is formed on **said plurality of electrodes** and on said bonding layer located on said second substrate".

The reason for the change is to correct a minor error in the "said of electrodes". It should be "said plurality of electrodes".

Allowable Subject Matter

Art Unit: 2841

4. Claims 1-10 and 14-17 are allowed.

Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance: The amended claims have overcome the objections and the 35 U.S.C. 112 rejections from the previous Office action. For clarification, the prior arts fail to teach, disclose, or fairly suggest, either alone or in combination, at least on claim 1, a bonding structure between two substrates, in which one of the substrates has metal pads, a protection layer, an adhesive metal layer, a buffer layer, and a metal layer formed thereon. The other substrate has electrodes and a bonding layer formed thereon. On the first substrate, the buffer layer is coated on the protection layer and on the adhesive metal layer, and the metal layer covers the buffer layer, wherein the metal layer is independently distributed on the surface areas of the buffer layer opposite to the protection and adhesive metal layer. On the other substrate, the electrodes and the bonding layer are also independently distributed on the substrate. And, the metal layer, the electrodes, and the bonding layer are bonded to complete the bonding structure. None of the prior art of record discloses such a bonding structure formed in between two substrates as claimed by the applicants.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
